

Current INDCs Deliver 3.5°C; With Action 2°C is Possible

Staying below 2°C requires all countries to take immediate action with deep, long-term emissions reductions.

Pledges that go further than current INDCs would yield improvement if:

- Pledged reductions continue post 2025-2030: **3.3°C** (6.0°F);
- China continues reductions after emissions peak in 2030: **3.2°C** (5.8°F);
- 'Other Developing' countries also peak by 2035: **2.6°C** (4.7°F); and
- All countries peak and then reduce 3.5 - 4% per year as per the '2°C Pathway': **2.0°C** (3.6°F).

Current INDCs (3.5°C)

2°C Pathway

Notes:

- 'No Action' is IPCC's RCP 8.5 path.
- 'Current INDCs (3.5°C)' assumes no continued reductions by developed countries and no further action from developing countries post 2025-2030. It delivers a 50/50 possibility of 3.5°C (6.3°F) with 90% confidence that the range is 2.1 to 4.6°C (3.7 to 8.4°F).
- The regional distribution of emissions reductions in '2°C Pathway' is one representation of many possible approaches.
